InfoZen's Risk Management, Identity Management and Secure Solutions products and services provide protection.

- Protection from potential terrorist threats.
- Protection for vulnerable data and systems.
- Protection for the privacy of U.S. citizens.

and protection from the high costs of errors or regulatory non-compliance.

Why InfoZen?

InfoZen, Inc. is at the forefront of the companies now developing risk-screening credentialing and management solutions that integrate analytics functionality, offer a high level of security and comply with the USA PATRIOT Act. Because InfoZen has extensive expertise architecting, building and deploying this technology, it is able to offer quick proof-of-concept, rapid prototyping, and the ability to quickly deliver a complete solution.

A trusted risk management partner of the United States Department of Homeland Security (DHS), InfoZen applies comprehensive, systematic and collaborative approaches to all processes including system development and implementation. Harnessing resources, knowledge and creativity from around the world, InfoZen's operational expertise and proven methodologies repeatedly deliver solutions that address the client's business priorities and unique needs.

RapidAdjudicator™ Credentialing and Identity Risk Management Platform

As national security threats and economic risks escalate, so does the need to assess and respond to potential risk sources. **Timely, accurate and consistent data access** is crucial for threat analysis and action. But today's fragmented risk management environment poses challenges to the centralization of threat elements and data management.

InfoZen's **RapidAdjudicator™** Credentialing and Identity Risk Management Platform overcomes those challenges. It is an automated, modular, configurable screening and credentialing system that helps users retrieve, summarize and analyze decision-relevant information. It facilitates rapid adjudication and identification of potential threat elements that affect national security.

Security/Information Assurance Services

Securing critical information and business assets is more vital than ever in the face of today's complex threat environment. Multiplying vulnerabilities and continual technology expansion can cause an organization to rapidly lose control of information assets to both internal and external threats.

InfoZen provides a **structured approach to developing, maturing, and maintaining information security programs** in high-threat, high-profile environments.

InfoZen applies operational expertise and proven information security methodologies to **help clients navigate the often confusing world of security guidelines and governing policies** to ensure compliance and attention to specific Agency and Department security requirements.

Privacy and Information Assurance

A comprehensive and systematic Privacy Impact Assessment (PIA) at the design stage of a new technology implementation can **prevent costly privacy errors and measure consumer response** to the technology. InfoZen and its PIA partners have developed a PIA methodology that leverages depth of experience in the implementation of new technology projects.

The PIA systematically identifies and addresses privacy issues to **determine whether a system and related business practices meet privacy requirements**, and assists in gauging consumer acceptance. PIAs are expected to serve an increasingly vital role in managing the extensive privacy issues associated with biometrics applications. The PIA process also increases consumer confidence in the use of biometrics.
